Data governance

The data governance document describes data changes introduced in this release.

Enabling fields in the Extended Data Model

Veeva OpenData fields can be enabled to load local or third party master data. A field can be Veeva-mastered in some countries, mastered by a third party source in other countries, or be owned by a customer in the remaining countries. Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model > Network Data Model**.

For more information about enabling Veeva OpenData fields for local or third party data use source, see the topic called *Enabling data model fields* in the *Veeva Network Online Help*:

<https://docs-vdm.veevanetwork.com/doc/vndocad/Content/Home.htm>

Global data updates

The following sections describe reference data considerations and updates for applicable regions.

FIELD LENGTHS

Suggested field lengths have been changed for the following fields:

Object	Field Name	Previous Length	New Length
HCO	340B_eligible__v	NULL	20
HCO	business_type__v	NULL	100
HCO	co_commissioning__v	200	20
HCO, Address	fax_1__v to fax_10__v	15	30
HCP	hcp_focus_area_1__v to hcp_focus_area_5__v	Null	300

Object	Field Name	Previous Length	New Length
HCP	hcp_focus_area_11__v to hcp_focus_area_36__v	100	300
HCP	hcp_tax_id__v	200	20
HCO	hco_focus_area_1__v to hco_focus_area_5__v	NULL	300
HCP, HCO, Address, License, ParentHCO	is_proprietary__v	NULL	10
HCP, HCO	market_access__v	100	20
HCO	operating_budget__v	NULL	15
HCP	opt_out__v	100	20
HCP, HCO, Parent HCO, Address	phone_1__v to phone_10__v	15	30
HCP	prefix__v	NULL	25

Network does not have fixed field lengths but provides suggested lengths for downstream systems. These changes have been made for consistency across fields and objects but have no impact to data stored in Network. If you have used these field lengths when mapping fields in downstream systems, you can choose to update them. If you choose not to make adjustments, there are no negative impacts to data sent to downstream systems.

ALL COUNTRIES

New fields have been added to the Network data model for all countries.

The following changes have been applied:

Object	Field	Reference Type	Code	Description	Translation
Address, HCP, License	administrative_area__v, birth_state__v, license_admin_area__v	AddressAdminArea	TW-KIN	Kinmen	金門縣

TURKEY

The following field has been added for the HCO object:

- `emr_system_name__v` – Electronic Medical Records system name.

UNITED STATES

The following field has been added for the License object:

- `source_address__v` – The address from the license source.

There might be two Addresses shown for US license records now. The original address field contains the license address, as usual. The `source_address__v` field contains the raw address data sent by the license data source. The two addresses might be different because the raw

address is not verified by Loqate. The source address has been added to license records for compliance reasons.

The following Electronic Medical Records (EMR) fields have been added for the HCO object:

- `emr_vendor_name_1__v` to `emr_vendor_name_7__v` – Vendor names for Electronic Medical Records.
- `emr_product_name_1__v` to `emr_product_name_7__v` – Product names for Electronic Medical Records.
- `emr_product_version_1__v` to `emr_product_version_7__v` – Product versions for Electronic Medical Records.

These fields will not be enabled, by default, in new Network instances. A new section for EMR data has been added to Profile layouts, but the section will be collapsed unless it contains data.

Two existing EMR fields, `emr_system_name__v` and `emr_installation_date__v`, are moved to the new profile section. These fields are active, by default, in existing Network instances.

No EMR fields will be active in new Network instances, by default, after version 17R2.0. The EMR section in the profile layout does not display until at least one of the fields is enabled.

Enabling any one of the new EMR fields automatically enables the fields that are similarly numbered (for example, enabling `emr_vendor_name_1__v` automatically enables `emr_product_name_1__v` and `emr_product_version_1__v`). The existing fields, `emr_system_name__v` and `emr_installation_date__v` can be enabled individually.

The following changes have been applied:
