Data governance

The data governance document describes data changes introduced in this release as of the publication date of this document.

Adding new fields to your Veeva OpenData subscription

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be mastered by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called [Adding Veeva OpenData fields](#) in the *Veeva Network Online Help*.

Enabling Veeva OpenData fields for extended use

Veeva OpenData fields can be enabled to load local or third party master data. A field can be Veeva-mastered in some countries, mastered by a third party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model > Network Data Model**. For more information about enabling Veeva OpenData fields for local or third party data use source, see the topic called [Enabling data model fields](#) in the *Veeva Network Online Help*.

Data Governance updates

No reference data updates have been added since the Sandbox version.

Global data updates

The following sections describe reference data considerations and updates for applicable regions.

NEW OPENDATA FIELDS

New master fields have been added for US OpenData.

The following field has been added for the HCO object:

- `drg_hco_id__v` – Decision Resources Group identifier for healthcare organizations.

The following field has been added for the HCP object:

- `drg_hcp_id__v` – Decision Resources Group identifier for healthcare providers.

The following fields have been added for the parent HCO object:

- `entity_address_vid__v` – Network entity ID (VID) of the address on the entity that owns the ParentHCO relationship.
- `parent_hco_address_vid__v` – Network entity ID (VID) of the address from the related Parent HCO.

All of the new fields are disabled by default.

UPDATED FIELD DESCRIPTION

This field has the following updated description:

- `formatted_name__v` – Network calculated field used to display HCP name on profile page. Empty fields are populated with default concatenation rule of `first_name__v + last_name__v` unless country specific rules exist (see Help).

This field is used by OpenData in all countries.
