## **Data governance**

---

The data governance document describes data changes introduced in this release as of the publication date of this document.

## **Adding new fields to your Veeva OpenData subscription**

---

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be mastered by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called [Adding Veeva OpenData fields](#) in the *Veeva Network Online Help*.

## **Enabling Veeva OpenData fields for extended use**

---

Veeva OpenData fields can be enabled to load local or third party master data. A field can be Veeva-mastered in some countries, mastered by a third party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model > Network Data Model**. For more information about enabling Veeva OpenData fields for local or third party data use source, see the topic called [Enabling data model fields](#) in the *Veeva Network Online Help*.

## **Localization**

---

In version 20R1.1, Spanish (Mexico) was added as a new reference data language. Now, the Network user interface will also be translated when users change their language preference to Spanish (Mexico).

## Updates to administrative areas for Great Britain

Veeva OpenData is adjusting the Great Britain (GB) data model to improve the management of GB country and administrative areas information.

Veeva OpenData manages the County field for GB addresses (also called “Administrative Area” or “Province”). To avoid different and inconsistent definitions of the County (for example, geographical counties vs. postal counties vs. historical counties), nation information (England, Scotland, Wales, Northern Ireland) will be delivered in the County field instead of the current values (Essex, Devon, Cumbria, and so on).

The AddressAdminArea reference codes have been standardized to include only the principal GB subdivisions (country or provinces):

- GB-CHA (Channel Islands)
- GB-ENG (England)
- GB-IOM (Isle of Man)
- GB-NIR (Northern Ireland)
- GB-SCT (Scotland)
- GB-WLS (Wales)

The existing AddressAdminArea codes are still available. These new aliases will be used when addresses are verified.

## Changes to field labels and descriptions
