Data governance

The data governance document describes data changes introduced in this release as of the publication date of this document.

Adding new fields to your Veeva OpenData subscription

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be managed by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called [Adding Veeva OpenData fields](#) in the *Veeva Network Online Help*.

Enabling Veeva OpenData fields for extended use

Veeva OpenData fields can be enabled to load local data or third party data. A field can be managed by Veeva in some countries, managed by a third party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model** and choosing the **Customer Master** data domain. Click **Export Data Model** or select an object to view specific field details.

For more information about enabling Veeva OpenData fields for local or third party data use, see the topic called [Enabling data model fields](#) in the *Veeva Network Online Help*.

Data governance updates

No changes have been made to the reference data since the 21R2.1 Sandbox version of this document was published.

New country support

Veeva OpenData data models have been added for countries in Latin America.

- Bahamas (BS)
- Barbados (BB)
- Bermuda (BM)
- Cayman Islands (KY)
- Curacao (CW)
- Jamaica (JM)
- Trinidad and Tobago (TT)

The data models are based on the Other Countries (ZZ) data model. The data models also include additional fields so they are consistent with other Latin American OpenData data models.

The activated reference codes are based on the reference codes that are activated for Other Countries (ZZ), along with additional reference codes supported by the Latin America OpenData team.

Localization

- Jamaica - English (en) translations will be used for the Network UI, data model fields, and reference data.
- All other new countries - Spanish (es) translations will be used for the Network UI and data model fields. Spanish-Mexico (es-MX) translations will be used for reference data.

New language support

Korean (KO) is now supported for data model fields and reference codes. Korean characters can also be used in Network search. Korean is not supported for the Network UI.

This enhancement is enabled in your Network instance by default.

To set the language in your Network instance:

1. On the Network menu bar, click **My Profile**.
2. In the Settings section, expand the **Language** list and select **Korean**.
3. **Apply** your changes.

Field updates for Europe

New fields have been added for countries in Europe. The fields will be automatically added to standard profile layouts, but they must be added to any custom profile layouts that you have created for this country or region.

Poland

A new field has been added for the HCO object for Poland.

- `csioz_id__v` – The unique identifier for Healthcare organizations in Poland (CSIOZ ID).

This is a new field so it will be managed by Veeva OpenData by default.

France and Monaco

A new reference type field has been added for the HCP object for France and Monaco.

- `professional_activity_mode__v` – An HCP’s professional activity distribution within the public and private sector.

This is a new field so it will be managed by Veeva OpenData by default.

A new reference type, `HCPProfActivityMode`, is added for this field.

Reference codes

Reference Code	Label (English)	Definition
MHTPA	Dual Practitioner	A medical practitioner engaged in a public hospital and a private practice or a clinic.
MHTP	Hospital Practitioner	A medical practitioner engaged in one or more public hospitals.
PLIB	Private Practitioner	A healthcare practitioner working in the private sector who has their own practice.
