Data governance

The data governance document describes data changes introduced in this release as of the publication date of this document.

Adding new fields to your Veeva OpenData subscription

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be managed by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called [Adding Veeva OpenData fields](#) in the *Veeva Network Online Help*.

Enabling Veeva OpenData fields for extended use

Veeva OpenData fields can be enabled to load local data or third party data. A field can be managed by Veeva in some countries, managed by a third party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model** and choosing the **Customer Master** data domain. Click **Export Data Model** or select an object to view specific field details.

For more information about enabling Veeva OpenData fields for local or third party data use, see the topic called [Enabling data model fields](#) in the *Veeva Network Online Help*.

Formatted name for Malaysia

The custom calculation has been updated for the `formatted_name__v` field for Malaysia. The formatted name uses values from several name fields to display a complete name for an HCP.

This update is enabled by default in your Network instance.

New name calculation

HCP names for Malaysia are now calculated using these Veeva fields in the following order:

```
first_name__v + middle_name__v + last_name__v
```

Previously, the name calculation was the following:

```
first_name__v + last_name__v
```

The formatted name displays on the profile page.

Field updates for Network Address Inheritance

A new field is added to the Address object for all countries (including ZZ countries):

- `parent_address_entity_vid__v` – Unique Veeva ID of the entity from related parent address.

This is a system field that is only enabled if the Network Address Inheritance feature is enabled in your Network instance. The field is read-only. It is not added to standard profile layouts.

For more information about this field, see the “Network Address Inheritance” topic in the *Veeva Network 23R3.0 Release Notes*.

Field updates for APAC

New or existing fields have been added for these countries. Fields will be automatically added to standard profile layouts, but they must be added to any custom profile layouts that you have created for this country or region.

Hospital Grade field

The `hospital_grade__v` field is added to the HCO object for the following countries:

- Indonesia (ID)
- Korea (KR)
- Philippines (PH)
- Thailand (TH)
- Vietnam (VN)

This is an existing field, so it is not managed by Veeva OpenData by default.

Hospital Grade field definition

The definition of the field is updated in this release.

Field	Previous Definition	New Definition
<code>hospital_grade__v</code>	Grade of hospital	A rating of hospitals based on factors such as hospital size, research direction, talent and technical capabilities, and medical hardware equipment. This rating is set by relevant country/state authorities.

License data field

The `effective_date__v` field is added to the License object for the following countries:

- Indonesia (ID)
- Malaysia (MY)
- Philippines (PH)
- Thailand (TH)

This is an existing field, so it is not managed by Veeva OpenData by default.

Updates for Singapore

A new field is added to the License object:

- `licensing_body__v` – Licensing body

This is an existing field, so it is not managed by Veeva OpenData by default.

Updates for South Korea

A new field is added to the HCP object:

- `grad_school__v` – Name of graduation school

This is an existing field, so it is not managed by Veeva OpenData by default.

Updates for Taiwan

The following existing fields have been added to the HCP object:

- `alternate_first_name__v` – Alternate first given name of the HCP
- `alternate_middle_name__v` – Alternate middle given name(s) of the HCP
- `alternate_last_name__v` – Alternate family name/last name/surname of the HCP
- `nickname__v` – Self-selected first name by which the HCP prefers to be addressed, not from a legal or official source, and different from First Name

These are existing fields, so they not managed by Veeva OpenData by default.

Field updates for China

Existing fields have been added for these regions. Fields will be automatically added to standard profile layouts, but they must be added to any custom profile layouts that you have created for these regions.

Fields for Hong Kong and Macao

The following existing fields have been added to the HCP object:

- `alternate_first_name__v` – Alternate first given name of the HCP
- `alternate_middle_name__v` – Alternate middle given name(s) of the HCP
- `alternate_last_name__v` – Alternate family name/last name/surname of the HCP
- `nickname__v` – Self-selected first name by which the HCP prefers to be addressed, not from a legal or official source, and different from First Name.

These are existing fields, so they not managed by Veeva OpenData by default.

Field updates for EMEA

New or existing fields have been added for these countries. Fields will be automatically added to standard profile layouts, but they must be added to any custom profile layouts that you have created for this country or region.

Updates for France

A new field is added to the HCO object:

- `association_id__v` – Association ID

This is a new field, so it is managed by Veeva OpenData by default.

Updates for Germany

A new field is added to the HCO object:

- `pharmacy_operating_license__v` – Flag to indicate whether the retail pharmacy is legitimately registered and has a valid operating license to receive and distribute prescription and pharmacy-only drugs

This field supports the new Pharmacy Operating License field-level subscription for Germany. The field is managed by OpenData by default.

For more information about this new subscription, see the “Pharmacy Operating License” topic in the *Veeva Network 23R3.0 Release Notes*.

Updates for Cyprus and Malta

An existing field is added to the HCP object:

- `registration_id__v` – Registration ID

This is an existing field, so it is not managed by Veeva OpenData by default.

Updates for North Macedonia

An existing field is added to the HCO object:

- `national_id__v` – National ID

This is an existing field, so it is not managed by Veeva OpenData by default.

Tax field

The `hco_tax_id__v` (Tax Number) field is added to the HCO object for the following countries:

- Albania (AL)
- Bulgaria (BG)
- Croatia (HR)
- Romania (RO)

This is an existing field, so it is not managed by Veeva OpenData by default.

Global data updates

The following sections describe reference data considerations and updates for applicable regions.

ALL COUNTRIES

The following changes have been applied:

Object	Field	Reference Type	Code	Description (EN)	Translation
