Veeva Network 20R1.0.2 Patch Release Notes

May 2020

Contents

Updates in this release

This patch resolves the following issues:

Issues were occurring when report queries contained fields with Boolean values.

Source subscriptions displayed a "Server having problems" error.

The data quality test case called `Address - Invalid / Deleted / Merged Into Address with Active Custom Key` failed to run.

In some cases, data stewards were unable to approve data change requests.

Addresses in Puerto Rico could not be verified when Puerto Rico is the state/province and United States is the country.

A reporting column limit was causing an "Unknown error. Target lists can have at most 1664 entries" error when running a query in the SQL Query Editor.

Data deduplication jobs that contained filters with Boolean values displayed null pointer exceptions.

The `language__v` (value added tax ID) field has been added to the HCO and HCP entities for the following EU countries:

- Armenia (AM)
- Azerbaijan (AZ)
- Belarus (BY)
- Georgia (GE)
- Greece (GR)
- Kazakhstan (KZ)
- Kyrgyzstan (KG)
- Moldova (MD)
- Russia (RU)
- Tajikistan (TJ)
- Turkmenistan (TM)
- Ukraine (UA)
- Uzbekistan (UZ)

This field is reference field that uses the Language reference type.
