Veeva Network 23R1.0.2 Patch Release Notes

May 2023

Contents

Updates in this release

This patch resolves the following issues:

- New email validation on the Profile page prevents users from updating a record if the record contains an existing email with an invalid format.
- In some situations, a data change request cannot be accepted when there are multiple sub-objects on the entities that are also pending changes in a queued DCR.
- Profile previews are read-only but Edit mode icons display beside fields.
- In some situations, custom reference field labels display as "Undefined" on the Profile page.
