ISSUES RESOLVED

This patch resolves the following issues:

- **API access** – Users with API access for specific systems cannot retrieve records they previously had access to.
- **OpenData subscriptions** - Jobs fail if a sub-object (for example, address) tries to merge into itself.
- **My Requests page** - Users cannot view all their submitted data change requests.
- **Downloading OpenData records** - In some situations, jobs that download OpenData records fail because of merge conflicts.
