Data governance

The data governance document describes data changes introduced in this release as of the publication date of this document.

Adding new fields to your Veeva OpenData subscription

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be mastered by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called [Adding Veeva OpenData fields](#) in the *Veeva Network Online Help*.

Enabling Veeva OpenData fields for extended use

Veeva OpenData fields can be enabled to load local or third party master data. A field can be Veeva-mastered in some countries, mastered by a third party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model > Network Data Model**. For more information about enabling Veeva OpenData fields for local or third party data use source, see the topic called [Enabling data model fields](#) in the *Veeva Network Online Help*.

Data governance updates

No changes have been made to the reference data since the 19R3.1 Sandbox version was published.

Changes have occurred since the Early version of this document was published:

The following enhancement has been removed:

- **New countries supported** - A data model has been added for 36 new countries for Veeva OpenData. The newly supported countries are in Africa and the Middle East.

At this time, Veeva OpenData will not have master data for these countries.

All material in the Data Governance document should be reviewed to ensure that updates are noted.

Global data updates

The following sections describe reference data considerations and updates for applicable regions.

NEW REFERENCE DATA LANGUAGE

Hebrew (HE) has been added as a new reference data language to support Israel (IL). The Network UI and data model for Israel is in English.

FIELD LABEL CHANGES

The Portuguese translation is updated for the following field label:

- `alternate_last_name__v` – Apelido Clinico.

The previous label translation was Apelido alternative.

US VEEVA OPENDATA SUBSCRIPTIONS – HIN DATA

A new subscription, **Include HIN data**, has been added to US OpenData subscriptions. For compliance, Veeva OpenData can provide HIN data only to customers that have a HIN license. Previously, HIN ID data was available to all customers.

If you subscribe to US OpenData and have a HIN license, the HIN subscription will be enabled and you will continue to receive the data. There is no extra cost for receiving HIN data.

If you do not have a HIN license, the subscription cannot be enabled; the option will be dimmed on the US OpenData subscription.

For new customers, the HIN subscription is disabled by default until a license is verified.

If you do not have a HIN license, the `hin__v` field can be managed locally; data change requests on the HIN ID will be sent to local data stewards. The HIN field is useful for matching purposes.
