Data governance

The data governance document describes data changes introduced in this release as of the publication date of this document.

Adding new fields to your Veeva OpenData subscription

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be mastered by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called Adding Veeva OpenData fields in the *Veeva Network Online Help*.

Enabling Veeva OpenData fields for extended use

Veeva OpenData fields can be enabled to load local or third-party master data. A field can be Veeva- mastered in some countries, mastered by a third-party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model > Network Data Model**. For more information about enabling Veeva OpenData fields for local or third-party data use source, see the topic called Enabling data model fields in the *Veeva Network Online Help*.

Field updates

NEW SYSTEM FIELDS

The following existing fields for the Address object will become system fields in Network version 21R2.0:

- sub_building_floor__v
- geo_accuracy_code__v
- administrative_area_parsed__v

System fields are enabled by default and cannot be disabled. These fields will be enabled in all existing and new Network instances.

FIELD UPDATES FOR LATIN AMERICA

Updates for several countries

The following existing fields have been added for the License object for several countries.

- effective_date__v – Effective date for the license.
- expiration_date__v – Expiration date for the license.

Countries:
