Data governance

The data governance document describes data changes introduced in this release as of the publication date of this document.

Adding new fields to your Veeva OpenData subscription

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be managed by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called [Adding Veeva OpenData fields](#) in the *Veeva Network Online Help*.

Enabling Veeva OpenData fields for extended use

Veeva OpenData fields can be enabled to load local data or third party data. A field can be managed by Veeva in some countries, managed by a third party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model** and choosing the **Customer Master** data domain. Click **Export Data Model** or select an object to view specific field details.

For more information about enabling Veeva OpenData fields for local or third party data use, see the topic called [Enabling data model fields](#) in the *Veeva Network Online Help*.

New countries supported

Veeva OpenData data models have been added for countries in the following regions:

Asia Pacific

A data model has been added for South Korea (KR).

The data model is based on the Other Countries (ZZ) data model. The activated reference codes for South Korea are based on the reference codes that are activated for Other Countries (ZZ).

Localization

- English (en) translations will be used for the Network UI and data model fields.
- Australian-English (en-AU) translations will be used for reference data.

Europe

A data model has been added for Albania (AL).

The data model is based on the Other Countries (ZZ) data model. The data model also includes additional fields to be consistent with the EU OpenData data model.

The activated reference codes for Albania are based on the reference codes that are activated for Other Countries (ZZ), along with additional reference codes supported by the EU OpenData team.

Localization

English translations will be used for the Network UI, data model fields, and reference data.

Latin America

A data model has been added for each of the following countries:

- Ecuador (EC)
- Peru (PC)

The data models are based on the Other Countries (ZZ) data model. The data model also includes additional fields to be consistent with other Latin American OpenData data models.

The activated reference codes for Ecuador and Peru are based on the reference codes that are activated for Other Countries (ZZ), along with additional reference codes supported by the Latin America OpenData team.

Localization

- Spanish (es) translations will be used for the Network UI and data model fields.
- Spanish-Mexico (es-MX) translations will be used for reference data.

View the data models

To view the data model for these new countries:

1. In the Admin console, click **Data Model** and choose the **Customer Master** data domain.
2. Select an object.
3. In the **Fields** section, expand the **Country** list and choose the country.
4. Repeat for the other objects.

Alternatively, click **Export Data Model** and filter the downloaded file to review the fields enabled for each country.

Data privacy opt out

Veeva OpenData now manages HCP opt outs in the following countries:

- Albania (AL)
- Australia (AU)
- Singapore (SG)

Two data model fields have been enabled for these countries for the HCP object:

- `data_privacy_opt_out__v`
- `data_privacy_opt_out_date__v`

These fields are read-only in customer instances; they are managed by Veeva OpenData.

The fields will be automatically added to standard profile layouts, but they must be added to any custom profile layouts that you have created for these countries or regions.

Records that are opted-out by Veeva OpenData do not display and cannot be accessed in downstream systems. This ensures data privacy for opted-out HCPs to satisfy regional regulatory requirements.

To review the list of opted-out countries:

1. In the Admin console, click **Data Model > Data Domains** and choose the **Customer Master** domain.
2. Select the **Health Care Professional** object and find the `data_privacy_opt_out__v` field in the **Fields** section.
3. Click the field to review the list of opted-out countries that are managed by Veeva OpenData.

New languages for reference codes

Translations for Veeva reference codes are now available in the following languages:

- Croatian (HR)
- Icelandic (IS)
- Romanian (RO)
- Serbian (SR) (translations are in Latin characters)
- Slovenian (SL)

The translations are provided for reference codes that are active for these countries.

New read-only fields

The following existing fields are now read-only fields:

- `sub_building_floor__v`
- `geo_accuracy_code__v`
- `administrative_area_parsed__v`

These fields will be enabled in all existing and new Network instances. They cannot be disabled.

Field updates for several countries

Existing healthcare provider fields have been added for countries in Asia Pacific, Latin America, and North America.

An existing field has been added for the HCP and HCO objects:

- `healthcare_provider_id__v` - HCP/HCO National ID

An existing field has been added for the HCO object:

- `healthcare_provider_id__2__v` – Second HCO National ID

The fields have been added to the following countries:

Asia Pacific

- Australia (AU)
- New Zealand (NZ)
- Singapore (SG)

Latin America

- Argentina (AR)
- Brazil (BR)
- Chile (CL)
- Colombia (CO)
- Mexico (MX)

North America

- United States (US)

These are existing fields, so they will not be managed by Veeva OpenData by default.

The fields will be automatically added to standard profile layouts, but they must be added to any custom profile layouts that you have created for these countries or regions.

Field updates for Europe

New and existing fields have been added for these countries in Europe.

Updates for several countries

The `international_name__v` name field has been added for the HCP and HCO objects for several European countries:

- Armenia (AM)
- Azerbaijan (AZ)
- Belarus (BY)
- Georgia (GE)
- Kazakhstan (KZ)
- Kyrgyzstan (KG)
- Moldova (MD)
- Russia (RU)
- Tajikistan (TJ)
- Turkmenistan (TM)
- Ukraine (UA)
- Uzbekistan (UZ)

This is an existing field, so it is not managed by Veeva OpenData by default.

Updates for Ireland

A new field has been added for the HCP object for Ireland.

- `coru_id__v` – The unique identifier for Regulating Health & Social Care Professionals in Ireland (CORU ID).

This new field will be managed by Veeva OpenData by default.

When new and existing fields are added, they are automatically added to standard profile layouts, but they must be added to any custom profile layouts that you have created for these countries or region.

Global data updates

The following sections describe reference data considerations and updates for applicable regions.
