Data governance

The data governance document describes data changes introduced in this release as of the publication date of this document.

Adding new fields to your Veeva OpenData subscription

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be managed by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called [Adding Veeva OpenData fields](#) in the *Veeva Network Online Help*.

Enabling Veeva OpenData fields for extended use

Veeva OpenData fields can be enabled to load local data or third party data. A field can be managed by Veeva in some countries, managed by a third party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model** and choosing the **Customer Master** data domain. Click **Export Data Model** or select an object to view specific field details.

For more information about enabling Veeva OpenData fields for local or third party data use, see the topic called [Enabling data model fields](#) in the *Veeva Network Online Help*.

Field updates for APAC

Geo Subdivision fields

The `geo_subdivision__v` and `geo_subdivision_label__v` fields have been added to the Address object for the following countries:

- Australia (AU)
- Indonesia (ID)
- India (IN)
- South Korea (KR)
- Malaysia (MY)
- Philippines (PH)
- Pakistan (PK)
- Singapore (SG)
- Thailand (TH)
- Vietnam (VN)

Note: The fields can be managed locally for these countries. They do not apply to the Geo Subdivision subscription that is available to countries in Europe.

Additional field details

| | |
|-------------------------------|--|
| Managed by OpenData? | No. These are existing fields, so they will not be managed by OpenData by default. |
| Immediate data impact? | No. Enabling these fields in your Network instance will not result in immediate data updates. |
| Profile layouts | The fields are automatically added to standard profile layouts. They must be added to custom profile layouts created for these countries. |

Field updates for Canada

Alternate first name field

The following field has been added for the HCP object:

- alternate_first_name__v

Additional field details

Managed by OpenData? No. This is an existing field, so it will not be managed by OpenData by default.

Immediate data impact? No. Enabling this field in your Network instance will not result in immediate data updates.

Profile layouts The field already exists in standard profile layouts.
It must be added to custom profile layouts created for Canada.

Status reason fields

The following fields have been added for Canada:

- hcp_status_reason__v (HCP object)
- parent_hco_status_reason__v (ParentHCO object)

These reference fields use the **RelationStatusReason** reference type. The existing codes have been enabled for Canada.

Additional field details

Managed by OpenData? No. These are existing fields, so they will not be managed by OpenData by default.

Immediate data impact? No. Enabling these field in your Network instance will not result in immediate data updates.

Profile layouts The fields already exist in standard profile layouts.
It must be added to custom profile layouts created for this Canada.

Field updates for the United States

Symphony ID (SHA ID) field

The `sha_id__v` field is no longer managed by OpenData. The field is used by both HCPs and HCOs for US records.

In this release, the field will change from being managed by US OpenData to being managed by customers. The existing data will remain in the field so you can manage it locally.

For more information, see the *Veeva Connect* post: [Upcoming SHA ID Changes in OpenData](#).

Email fields

Veeva OpenData no longer manages email fields for HCOs on US records. This change will be enabled by default in your Network instance for the 24R3.0.1 Production release.

Impact

The Email field-level subscription is a separate subscription for US OpenData.

If you do not subscribe to Emails as part of your US OpenData country subscription, there is no change. All email fields remain locally managed in your Network instance.

If you have an Email subscription, the two email fields for HCOs on US records will change from being Veeva-managed to being locally managed:

- `email_1__v`
- `email_2__v`

Note: There is no data currently in those fields, so no email data will be lost.

Changes to the US Email subscriptions

After Network version 24R3.0, if you subscribe and enable the Emails subscription, only the HCP email fields will become managed by Veeva OpenData in the US. There are 11 fields in the HCP email subscription (`email_1__v` to `email_10__v` and `email_cda__v`).

Global data updates

The following sections describe reference data considerations and updates for applicable regions.

ALL COUNTRIES

The following changes have been applied:

| Object | Field | Reference Type | Code | Description (EN) | Translation |
|---------|------------------------|------------------|-------|------------------|-------------|
