Data governance

The data governance document describes data changes introduced in this release as of the publication date of this document.

Adding new fields to your Veeva OpenData subscription

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be managed by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called [Adding Veeva OpenData fields](#) in the *Veeva Network MDM Online Help*.

Enabling Veeva OpenData fields for extended use

Veeva OpenData fields can be enabled to load local data or third party data. A field can be managed by Veeva in some countries, managed by a third party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network MDM user interface by navigating to **Data Model** and choosing the **Customer Master** data domain. Click **Export Data Model** or select an object to view specific field details.

For more information about enabling Veeva OpenData fields for local or third party data use, see the topic called [Enabling data model fields](#) in the *Veeva Network MDM Online Help*.

Data Governance document updates

There have been no changes to the reference data since the Data Governance document was published for the 26R2.0 Sandbox release.

New fields enabled by default in this release

The following four fields will be automatically enabled in all Network MDM instances for version 26R2.0.

Field Name	Label	Object
record_unmerged_date__v	Unmerged Date	HCP, HCO, custom main object
record_unmerged_from_vid__v	Unmerged from Network ID	HCP, HCO, custom main object
record_unmerged_original_vids__v	Unmerged Original Record Network IDs	HCP, HCO, custom main object
object_cat_type__v	Object Category Type	License

Impact & Considerations

Because these fields will be enabled by default, they have an immediate data impact that requires action in a few key areas:

- **Target Exports:** New fields will automatically be included in target subscriptions that are configured to export *all* objects and fields. Identify target exports that pull "all fields" and ensure they won't break when these three new fields appear.
- **Reporting:** Any SQL queries or saved reports using SELECT * will return different results once these fields go live. Update any SELECT * reporting queries to use explicit field names instead, if those reports don't require these fields.
- **Profile Layouts:** The fields are added to the relevant standard profile layouts. Add them to custom profile layouts that are being used.

For additional details about these fields, see the related topics in the *Veeva Network MDM 26R2.0 Release Notes*.

Updates for the OpenData 2.0 data model

SUPPORT FOR LICENSES

Veeva OpenData introduced the OpenData 2.0 data model in June 2026. The data model supported the HCP, HCO, Address, and Parent HCO objects. In 26R2.0, the OpenData 2.0 data model is extended to support the License sub-object.

INTRODUCING IDENTIFIERS

Additionally, the License object now supports a dedicated Identifier category for managing IDs like HIN, NPI, and Tax IDs. Previously, these IDs were stored on entity record level fields. Identifiers will display in a separate section on record profiles. This enhancement gives you the flexibility to assign and track multiple instances of the same ID type on a single record.

SUPPORTED COUNTRIES FOR THE OPENDATA 2.0 DATA MODEL

The OpenData 2.0 data model is supported for all countries/regions except for the following:

- Belarus
- Burkina Faso
- China
- Ethiopia
- Hong Kong
- Iraq
- Japan
- Macao
- Madagascar
- Mali
- Sierra Leone
- Russia
- Tajikistan
- Turkmenistan
- Uzbekistan
- ZZ (All Other Countries)

MORE INFORMATION

For detailed information about License sub-object and Identifier category in the OpenData 2.0 data model, see the [Veeva Network MDM 26R2.0 Release Notes](#).

To learn when Veeva OpenData will begin loading data for the Licenses and Identifiers, follow the OpenData communities on Veeva Connect.

- [OpenData – APAC](#)

Note: This community is available by invite only.

- [Veeva Brazil Commercial Community](#)
- [OpenData - Europe](#)
- [Veeva LatAm Commercial Community](#)
- [OpenData - US](#)

Important: Veeva OpenData does not provide Identifier data by default. To receive Identifier data from OpenData the **Enable OpenData Identifier Sync** option must be set in **Settings > General Settings**.

OpenData 2.0 fields for Licenses

The License sub-object for OpenData 2.0 includes 30 fields.

To view the complete list of fields that are included, open the License object in the Data Model and filter the **Fields** section for the OpenData 2.0 Data Model Schema. All fields that are included will display the OpenData 2.0 data model tag.

NEW FIELDS FOR LICENSES

The following five new fields are added to the License sub-object for OpenData 2.0. The fields can apply to Licenses and/or Identifiers.

Field Name	Field Label (EN)	Field Type	Description	License or Identifier?
id_priority__v	Identifier Priority	Reference Type (IdentifierPriority)	Indicates whether the identifier for the HCP or HCO is the primary identifier or an additional (secondary) one. There are two possible values: PRIM (Primary) and SCND (Secondary).	Identifier
issuer_name__v	Issuer Name	Reference Type (IssuerName)	The official name of the regulatory body, government agency, or professional council that issued the specific license, or the standardized designation of the identifier type assigned to the Health Care Professional or Organization in a certain country.	License Identifier
license_id_number__v	License/ID Number	Text	Unique identifier or license number issued to the HCP/HCO.	License Identifier
license_name__v	License Name	Reference Type (LicenseNameLocal)	License name. Describes what the license is for; for example, Nurse Practitioner.	License

Field Name	Field Label (EN)	Field Type	Description	License or Identifier?
object_cat_type__v	Object Category Type	Reference Type (ObjectCategoryType)	This is an important field that determines if the record is a License or an Identifier. Possible values: LICENSE, ID or no value. After the value is set, it cannot be changed. The default value for new records is LICENSE. Existing License records are set to NULL. When a record is updated for any reason, the value will be set to LICENSE. Existing License records cannot become Identifiers.	License Identifier

Additional field details

Managed by OpenData?

For Licenses - Yes. These are new fields, so they will be managed by OpenData.
For Identifiers - No. The fields are locally managed by default. To have them managed by OpenData, turn on the **Enable OpenData Identifier Sync** setting (**Settings > General Settings**).

Enabled by default?

New customers - Yes, all fields.
Existing customers - Only the Object Category Type field is enabled by default. Enable all fields in the OpenData 2.0 data model (**Settings > General Settings**) or enable the fields individually (**Data Model**).

Immediate data impact?

Yes. The Object Category Type field is enabled by default.
 For details about how this can impact your Network MDM instance, see the [New fields enabled by default](#) topic.

Profile layouts

Object Category Type is not added to Profile layouts.
 The remaining fields are automatically added to the License and/or Identifiers section on the standard profile layouts used by the OpenData 2.0 data model: GlobalStandard (HCOs) and GlobalStandard (HCPs).

The fields and the Identifiers section must be added to custom profile layouts.

EXISTING FIELDS ADDED TO LICENSES AND IDENTIFIERS

The following six existing fields have been added to the License sub-object for OpenData 2.0. They apply to both Licenses and Identifiers.

Field Name	Field Label (EN)	Field Type	Description
country_cda__v	Country (CDA)	Reference Type (AddressCountryCDA)	Name of country.
entity_object_type__v	Entity Object Type	Reference Type (ObjectEntityType)	Type of source entity, either HCO or HCP.
entity_veevaid__v	Entity Object Veeva ID	Text	Veeva ID of the HCP or HCO associated with this address or license.
state_cda__v	State/Province (CDA)	Reference Type (AddressStateCDA)	Name of state, province, or regional area.

Additional field details

Managed by OpenData?	For Licenses - Yes. These are new fields, so they will be managed by OpenData. For Identifiers - No. The fields are locally managed by default. To have them managed by OpenData, turn on the Enable OpenData Identifier Sync setting (Settings > General Settings).
Enabled by default?	New customers - Yes Existing customers - No. Enable all fields in the OpenData 2.0 data model (Settings > General Settings) or enable the fields individually (Data Model).
Immediate data impact?	No. Enabling these fields in your Network MDM instance will not result in immediate data updates. To receive Identifier data from Veeva OpenData, Network MDM Admins must turn on the Enable OpenData Identifier Sync setting. If the setting is not enabled, the fields are locally managed.
Profile layouts	The fields are not added to standard profile layouts. They must be added to custom profile layouts.

EXISTING FIELDS ADDED TO IDENTIFIERS

The following fields now apply to Identifiers.

Field Name	Field Label (EN)	Field Type	Description
license_status__v	Status	Reference Type (LicenseStatusItems)	Status of the License or Identifier.
vid__v	Network ID	Text	Network ID.

Additional field details

Managed by OpenData?	No. The fields are locally managed by default. To have them managed by OpenData, turn on the Enable OpenData Identifier Sync setting (Settings > General Settings).
Enabled by default?	New customers – Yes Existing customers – No. Enable all fields in the OpenData 2.0 data model (Settings > General Settings) or enable the fields individually (Data Model).
Immediate data impact?	No. Enabling these fields in your Network MDM instance will not result in immediate data updates. To receive Identifier data from Veeva OpenData, Network MDM Admins must turn on the Enable OpenData Identifier Sync setting. If the setting is not enabled, the fields are locally managed.
Profile layouts	The fields are automatically added to the standard profile layouts used by the OpenData 2.0 data model: GlobalStandard (HCOs) and GlobalStandard (HCPs). They must be added to custom profile layouts.

UPDATES TO EXISTING LICENSE FIELDS

License status

Because the `license_status__v` field now applies to both Licenses and Identifiers, the field label and description is updated to reflect this change.

	Label (EN)	Description
Previous	License Status	License status
New	Status	Status of the License or Identifier.

Reference Data Updates for OpenData 2.0

The following updates have been made to reference types to support OpenData 2.0 data model fields.

NEW REFERENCE TYPES

The following reference types have been added.

These restricted reference types added for OpenData 2.0 are read-only; reference codes cannot be added, updated, or removed.

Reference Type	Used by Fields	Object	Restricted?	Details
IdentifierPriority	id_priority__v	License	Yes	Two possible values: Primary and Secondary.
IssuerName	issuer_name__v	License	Yes	
LicenseNameLocal	license_name__v	License	Yes	
ObjectCategoryType	object_cat_type__v	License	Yes	Two possible values: License and Identifier.

To review the reference codes for each new type, go to **Data Model > Reference Data**.

UPDATES TO EXISTING REFERENCE TYPES

The following reference types for License object fields have been updated to be restricted (read-only). Reference codes can no longer be added, updated, or removed from these reference types.

Reference Type	Used by Fields
CollabAgree	collab_agree_required__v
ComplLicenseEligibility	comprehensive_prescriptive_authority__v, comprehensive_sample_eligibility__v
CTRLSubPrescriptive	ctrl_substance_prescriptive__v
CTRLSubSampling	ctrl_substance_sample__v
LicenseCertification	license_certification__v
LicenseDEACode	dea_business_activity_code__v
LicenseDEAPaymentIndicator	dea_payment_indicator__v
LicenseEligibility	license_eligibility__v, rxa_eligible__v
LicenseStatusCondition	license_status_condition__v
LicenseSubType	license_subtype__v

Field updates for all countries

FIELDS FOR UNMERGED RECORDS

The following system fields have been added to HCO, HCP and custom main objects to provide additional details on unmerged records.

Field Name	Label	Description
record_unmerged_date__v	Unmerged Date	Date when the record was unmerged.
record_unmerged_from_vid__v	Unmerged from Network ID	Network ID of record that this record was unmerged from
record_unmerged_original_vids__v	Unmerged Original Record Network IDs	The Network IDs of the records that existed before they were merged. It confirms which original record's data is now being restored into the new record.

Supported countries

- All countries

Additional field details	
Managed by OpenData?	Yes
Enabled by default?	Yes, for all Network MDM instances.
Immediate data impact?	Yes For details about how this can impact your Network MDM instance, see the New fields enabled by default topic.
Profile layouts	The fields will be added to standard layouts. They must be added to custom profile layouts.

For information about the enhancement, see the [New fields for unmerged records](#) topic in the *Veeva Network MDM 26R2.0 Release Notes*.

Field updates for EMEA

REGION/COUNTRY FIELD

Additional field details	
Managed by OpenData?	Yes. This field will be managed by OpenData by default.
Enabled by default?	New customers – Yes Existing customers – No.
Immediate data impact?	No. Enabling the field in your Network MDM instance will not result in immediate data updates.
Profile layouts	The field is automatically added to the GlobalStandard (HCP/HCO) profile. It must be added to custom profile layouts created for these countries or regions.

GREECE AND UKRAINE

The following fields have been added to Greece and Ukraine to support storing Identifiers on the License object.

License status

Field Name	Field Label (EN)	Field Type	Description
license_status__v	Status	Reference Type (LicenseStatus)	Status of the License or Identifier.

Additional field details	
Managed by OpenData?	No. This is an existing field, so it will not be managed by OpenData by default.
Enabled by default?	New customers – Yes Existing customers – No.
Immediate data impact?	No. Enabling the field in your Network MDM instance will not result in immediate data updates.
Profile layouts	The field is automatically added to standard profile layouts. It must be added to custom profile layouts created for these countries or regions.

**System fields**

Field Name	Field Label (EN)	Field Type	Description
created_date__v	Created Date	DateTime	Date this record was created
custom_keys__v	Set of Custom Keys	Set	Set of custom keys for this Record
entity_type__v	Entity Type	Reference Type (EntityType)	Entity Type
entity_vid__v	Network ID of Owner	Long	Entity Network ID
is_externally_mastered__v	Externally Mastered Record?	Boolean	Is this an externally mastered record
is_proprietary__v	Proprietary Record?	Boolean	Is this data proprietary to the customer
is_veeva_master__v	Veeva Master Record?	Boolean	Is this a Veeva mastered record
modified_date__v	Modified Date	DateTime	Date this record was last modified
record_delta_id__v	Delta ID	Long	Delta ID
record_merged_vid__v	Surviving Record Network ID	Long	Network ID of record that this record was merged into
record_state__v	Record State	Reference Type (RecordState)	Internal record state
status_update_time__v	Status Modified Date	DateTime	Date the status of this record was last modified
vid__v	Network ID	Long	Unique Network ID number

Additional field details

Managed by OpenData?	Yes. These are system fields, so they are managed by OpenData by default.
Enabled by default?	Yes. These are existing system fields that are used by other data model objects.
Immediate data impact?	No. Enabling the fields in your Network MDM instance will not result in immediate data updates.
Profile layouts	The fields are automatically added to standard profile layouts. It must be added to custom profile layouts created for these countries or regions.

KAZAKHSTAN

The following field is added to the License object:

- `status_update_time__v` – Date the status of this record was last modified.

Additional field details

Managed by OpenData?	Yes. This is a system field, so it is managed by OpenData by default.
Enabled by default?	Yes. This is an existing system field that is used by other data model objects.
Immediate data impact?	No. Enabling the field in your Network MDM instance will not result in immediate data updates.
Profile layouts	The field is automatically added to standard profile layouts. It must be added to custom profile layouts created for these countries or regions.

Field updates for Latin America

YEAR OF BIRTH

The following field on the HCP object will now be mastered by OpenData by default for all countries in Latin America.

- `year_of_birth_cda__v` – Birth year of the HCP.

Field updates for North America

HCO NAME

The following field is added to the HCO object for the United States:

- `hco_name_english__v` – English organization name where relevant.

Additional field details

Managed by OpenData?	Yes. This field is managed by OpenData by default.
Enabled by default?	No, unless it has already been enabled for other countries.
Immediate data impact?	No. Enabling the field in your Network MDM instance will not result in immediate data updates.
Profile layouts	The field is automatically added to the GlobalStandard (HCP/HCO) profile layouts. It must be added to custom profile layouts created for these countries or regions.
