Data governance

The data governance document describes data changes introduced in this release as of the publication date of this document.

Adding new fields to your Veeva OpenData subscription

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be mastered by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called [Adding Veeva OpenData fields](#) in the *Veeva Network Online Help*.

Enabling Veeva OpenData fields for extended use

Veeva OpenData fields can be enabled to load local or third party master data. A field can be Veeva-mastered in some countries, mastered by a third party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model > Network Data Model**. For more information about enabling Veeva OpenData fields for local or third party data use source, see the topic called [Enabling data model fields](#) in the *Veeva Network Online Help*.

Data governance updates

No changes have been made to the reference data since the 20R1.0 Sandbox version was published.

Veeva OpenData subscription updates

EMAIL SUBSCRIPTIONS FOR CHINA

A separate email subscription has been added to OpenData subscriptions for China (CN). This change aligns CN OpenData with other OpenData regions and allows you the option to manage the email data in your Network instance or have Veeva OpenData manage it. There is no additional cost for email data in China.

Enable the subscription

If you already subscribe to OpenData for China, you will be automatically subscribed to the separate email subscription on your China OpenData subscription page. New customers for China OpenData can enable the email subscription if they want the China OpenData team to manage their email data.

HCP Opt-out behavior

When HCP records are opted-out, the following fields values on the license object are now retained:

- `type__v`
- `type_value__v`
- `address_vid__v`

Previously, these field values were blanked out. The actual license number will still be blanked out on the license record.

New fields

The following sections describe fields that have been added to objects in the applicable regions.

NEW FIELDS FOR ALL COUNTRIES

The following field has been added for the Address object for all countries:

- `sub_building_floor__v` – This field contains the level/floor information, should one exist. For example, “L 7” could be a value contained in this field.

The field is enabled by default in new Network instances. Administrators can enable the field for existing Network instances.

Note: Field values will be validated during the address verification process.

NEW FIELDS FOR EU COUNTRIES

The following field has been added to the HCO and HCP entities for Austria, Germany, and Italy:

- `vat_id__v` – Value Added Tax ID. Identifier for value added tax purposes.

The following fields have been added to the HCP entity for Ireland:

- `idc_id__v` – Irish Dental Council ID. The unique identifier for dentists in Ireland.
- `nmbi_id__v` – Nursing and Midwifery Board of Ireland ID. The unique identifier for Nurses in Ireland.

NEW FIELDS FOR NORTH AMERICA

The following field has been added to the Address object for Canada:

- `provincial_website_presence__v` – Flag to indicate if the HCP was on the applicable provincial website during the most recent update.

The following field has been added to the HCO object for the United States:

- `integrichain_id__v` – IntegriChain identifier for health care organizations.

The following five fields have been added to the License object for the US:

Field	EN Label	Definition	Associated Reference Type
