Veeva Network 25R3.1.2 Patch Release Notes

March 2026

Contents

Issues resolved in this release

This patch resolves the following issues:

- **Match Rule Collections** – Significant delays occur when country groups containing many countries are updated and saved.

- **Anonymizing HCPs** – In some situations, phone numbers and email addresses remain visible in exports to downstream systems.

- **Suspect Match tasks** – Resolution notes do not display on the Inbox task.

- **Salesforce Upsert** (Veeva Connector) – A 'data too long' error occurs when Salesforce errors that contain more than 64-characters are not truncated
